

# Allopurinol (Aloprim<sup>®</sup>, Zyloprim<sup>®</sup>)

*Drs. Foster & Smith Educational Staff*

Allopurinol decreases the amount of uric acid produced in the body. It is given to prevent certain types of bladder stones (urate stones). Side effects are rare, but may include vomiting, diarrhea, pale gums, tiredness, or bleeding problems. Consult your veterinarian if your pet experiences these signs while being treated with allopurinol. Follow other recommendations to prevent urate stones such as increasing water intake, feeding special diets, and treating urinary tract infections.

Keep this and all other medications out of the reach of children and pets.

If you think your pet has been poisoned...

Contact your veterinarian or one of the Animal Poison Hotlines (listed below) if you think your pet may have accidentally received or been given an overdose of the medication.

\*\*ASPCA National Animal Poison Control Center

1-888-4ANI-HELP (1-888-426-4435). \$65.00 per case, billed to caller's credit card.

Follow-up calls can be made for no additional charge by dialing 888-299-2973.

There is no charge when the call involves a product covered by the Animal Product Safety Service.

\*\*Pet Poison Helpline - 24-hour service available throughout North America for pet owners and veterinary professionals who require assistance with treating a potentially poisoned pet.
