

# Metoclopramide (Reglan®)

*Drs. Foster & Smith Educational Staff*

Metoclopramide is used to prevent vomiting and esophageal reflux (stomach acid backing up into the esophagus) in dogs, cats, and many other pets. It may aid in the treatment of hairballs in rabbits. It is also used to prevent side effects, such as vomiting, resulting from chemotherapy. Because metoclopramide increases the movement of stomach and intestinal contents, it can affect the absorption of many oral drugs. Contact your veterinarian if your pet experiences constipation, behavior changes, sleepiness, or staggering while being treated with metoclopramide. NOTE: Since metoclopramide is chemically very similar to PABA, the sunscreen agent, it should not be handled by people allergic to PABA.

Keep this and all other medications out of the reach of children and pets.

If you think your pet has been poisoned...

Contact your veterinarian or one of the Animal Poison Hotlines (listed below) if you think your pet may have accidentally received or been given an overdose of the medication.

\*\*ASPCA National Animal Poison Control Center

1-888-4ANI-HELP (1-888-426-4435). \$65.00 per case, billed to caller's credit card.

Follow-up calls can be made for no additional charge by dialing 888-299-2973.

There is no charge when the call involves a product covered by the Animal Product Safety Service.

\*\*Pet Poison Helpline - 24-hour service available throughout North America for pet owners and veterinary professionals who require assistance with treating a potentially poisoned pet.

1-800-213-6680 (\$35.00 per incident). Staffed 24-hours a day.
