Trimeprazine and Prednisolone (Temaril-P®)

Drs. Foster & Smith Educational Staff

Trimeprazine is an antihistamine. Prednisolone is a corticosteroid that reduces inflammation. These two drugs may be combined and used for the treatment of itching and coughing in dogs. A common side effect is increased thirst and urination. Contact your veterinarian if your pet experiences sedation, muscle tremors, slow breathing, slow pulse, pale gums, incoordination, unconsciousness, or seizures while being treated with the combination of trimeprazine and prednisolone.

Keep this and all other medications out of the reach of children and pets.

If you think your pet has been poisoned...

Contact your veterinarian or one of the Animal Poison Hotlines (listed below) if you think your pet may have accidentally received or been given an overdose of the medication.

**ASPCA Animal Poison Control Center - 24-hour service available throughout North America.**

1-888-4ANI-HELP (1-888-426-4435) $65.00 per case, billed to caller’s credit card.

Follow-up calls can be made for an additional charge by dialing 888-299-2973.

There is no charge when the call involves a product covered by the Animal Product Safety Service.

**Pet Poison Helpline - 24-hour service available throughout North America for pet owners and veterinary professionals who require assistance with treating a potentially poisoned pet.**

1-800-213-6680 ($59.00 per incident). Staffed 24-hours a day.
