

Fluconazole (Diflucan®)

Drs. Foster & Smith Educational Staff

Fluconazole is used for the treatment of serious fungal infections, especially of the central nervous system (CNS). It is also used to treat yeast infections of the skin, and ringworm. It is used in dogs, cats, and other pets. Consult your veterinarian if your pet experiences loss of appetite, vomiting, jaundice (yellowing of the gums, skin, or whites of the eyes), depression, tiredness, anemia (pale gums and mucous membranes), or a skin rash while being treated with fluconazole.

Keep this and all other medications out of the reach of children and pets.

If you think your pet has been poisoned...

Contact your veterinarian or one of the Animal Poison Hotlines (listed below) if you think your pet may have accidentally received or been given an overdose of the medication.

**ASPCA Animal Poison Control Center - 24-hour service available throughout North America.

www.aspca.org/poison

1-888-4ANI-HELP (1-888-426-4435). \$65.00 per case, billed to caller's credit card.
